

**Q1.** Sodium metal has a work function of 2.28 eV. An atom of sodium has an ionisation energy of 5.15 eV.

- (a) (i) State what is meant by work function.

.....

.....

(2)

- (ii) State what is meant by ionisation energy.

.....

.....

(2)

- (b) Show that the minimum frequency of electromagnetic radiation needed for a photon to ionise an atom of sodium is about  $1.2 \times 10^{15}$  Hz.

(2)

- (c) Electromagnetic radiation with the frequency calculated in part (b) is incident on the surface of a piece of sodium.

Calculate the maximum possible kinetic energy of an electron that is emitted when a photon of this radiation is incident on the surface.

Give your answer to an appropriate number of significant figures.

maximum kinetic energy = ..... J

(3)

- (d) Calculate the speed of an electron that has the same de Broglie wavelength as the electromagnetic radiation in part (b).

speed = ..... m s<sup>-1</sup>

(3)

(Total 12 marks)

**Q2.** The photoelectric effect can be demonstrated by illuminating a negatively charged plate, made from certain metals, with ultraviolet (UV) light and showing that the plate loses its charge.

- (a) Explain why, when ultraviolet light is shone on a **positively** charged plate, no charge is lost by the plate.

.....

.....

(2)

- (b) Threshold frequency and work function are important ideas in the study of the photoelectric effect.

**Tables 1** and **2** summarise the work functions of three metals and photon energies of three UV light sources.

**Table 1**

Metal	Work function / eV
Zinc	4.3
Iron	4.5
Copper	4.7

**Table 2**

Light source	Photon energy /
--------------	-----------------

	eV
1	4.0
2	4.4
3	5.0

Discuss the combinations of metal and UV light source that could best be used to demonstrate the idea of threshold frequency and the idea of work function.

---

---

---

---

---

(6)

- (c) Calculate the maximum kinetic energy, in J, of the electrons emitted from a zinc plate when illuminated with ultraviolet light.

work function of zinc = 4.3 eV

frequency of ultraviolet light =  $1.2 \times 10^{15}$  Hz

maximum kinetic energy ..... J

(3)

- (d) Explain why your answer is a maximum.

.....

(1)  
(Total 12 marks)

**Q3.** When comparing X-rays with UV radiation, which statement is correct?

- A X-rays have a lower frequency.
- B X-rays travel faster in a vacuum.
- C X-rays do not show diffraction and interference effects.
- D Using the same element, photoelectrons emitted using X-rays have the greater maximum kinetic energy.

(Total 1 mark)

**Q4.** Monochromatic radiation from a source of light (source A) is shone on to a metallic surface and electrons are emitted from the surface. When a second source (source B) is used no electrons are emitted from the metallic surface. Which property of the radiation from source A must be greater than that from source B?

- A amplitude
- B frequency
- C intensity
- D wavelength

(Total 1 mark)

**Q5.** In a photoelectric experiment, light is incident on the metal surface of a photocell. Increasing the intensity of the illumination at the surface leads to an increase in the

- A work function

**B** minimum frequency at which electrons are emitted

**C** current through the photocell

**D** speed of the electrons

(Total 1 mark)

**Q6.** When ultraviolet light of frequency  $3.0 \times 10^{15}$  Hz is incident on the surface of a metal, electrons of maximum kinetic energy  $1.7 \times 10^{-18}$  J are emitted.

- (a) Explain why the emitted electrons have a range of kinetic energies up to a maximum value.

.....  
.....  
.....  
.....  
.....  
.....  
.....

(3)

- (b) (i) Show that the work function of the metal is 1.8 eV.

(3)

- (ii) Calculate the threshold frequency of the metal. Give your answer to an appropriate number of significant figures.

threshold frequency.....Hz  
(3)

- (c) (i) State and explain the effect on the emitted electrons of decreasing the frequency of the incident radiation whilst keeping the intensity constant.

.....  
.....  
.....  
.....

(2)

- (ii) State and explain the effect on the emitted electrons of doubling the intensity of the incident radiation whilst keeping the frequency constant.

.....  
.....  
.....  
.....

(2)  
(Total 13 marks)

**Q7.** The work function of sodium is 2.28 e V.

- (a) State what is meant by the term work function.

.....  
.....  
.....

(2)

- (b) Calculate the threshold frequency for sodium.

threshold frequency ..... Hz

(3)  
**(Total 5 marks)**
